

Project Executable Files

Date	30.09.2026
Team ID	SWTID-2026-3759
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	3 Marks

Submission Checklist

S.No	Item to Submit	Submitted
1	Complete ServiceNow project configuration	Yes
2	README / Setup Guide	Yes
3	Spreadsheet input file	Yes
4	Import Set Table and Transform Map configuration	Yes
5	Field Mapping and Coalesce configuration	Yes
6	Data validation and transformation results	Yes
7	Target table / imported records	Yes
8	Reports / Dashboard, if applicable	NA
9	Test files and test results	Yes
10	Demo video / walkthrough	NA

Run Instructions

Pre-requisites:

- ServiceNow developer instance
- Valid ServiceNow login credentials
- Employee spreadsheet (.xlsx) file
- Required permissions to create Import Sets and Transform Maps

Step 1: Prepare the spreadsheet

Create an Excel spreadsheet containing the required employee data.

Step 2: Load the spreadsheet

Navigate to System Import Sets → Load Data and upload the spreadsheet.

Step 3: Select the Import Set Table

Create or select the Import Set Table for the uploaded spreadsheet data.

Step 4: Create the Transform Map

Create a Transform Map and select the Import Set Table as the Source Table and the target table as the Target Table.

Step 5: Configure Field Maps

Map the spreadsheet fields to the corresponding target table fields.

Step 6: Configure Coalesce

Set Employee ID as the Coalesce field to identify existing records and avoid duplicate imports.

Step 7: Validate the data

Check the imported data for missing, invalid, or duplicate values.

Step 8: Run the Transform

Run the Transform Map to transfer the validated data from the Import Set Table to the target table.

Step 9: Verify the records

Open the target table and verify that the spreadsheet records have been imported successfully.

Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Duplicate Employee ID may occur in spreadsheet data	Employee ID is configured as Coalesce
2	Missing or invalid field values may cause transformation errors	Validate spreadsheet data before transformation
3	Incorrect field mapping may result in incorrect target data	Verify Field Maps before running Transform
