

Data Flow Diagram

Project Details Table:

Date	30.09.2026
Team ID	SWTID-2026-3759
Project Name	Import Data Using Inform Maps (Spreadsheet)
Maximum Marks	2 Marks

Data Flow Diagram:

Data Flow Diagram represents how employee data moves through the system, starting from the spreadsheet upload and ending with the transformed and validated employee records.

DFD Symbol Legend:

Symbol / Representation	Name	Description
Oval	External Entity	Represents the user/admin who uploads the spreadsheet data.
Rectangle	Process	Represents activities such as importing, processing and transforming data.
Cylinder	Data Store	Represents tables where imported or transformed employee data is stored.
Arrow	Data Flow	Shows the direction in which data moves between entities, processes and data stores.

Example:

The diagram illustrates how employee information is imported from a spreadsheet, processed through an Import Set, transformed using a Transform Map, validated using Employee ID as the coalesce field, and finally stored as employee records.
